

AKASH BAJPAI

Senior Full Stack Engineer | Backend & Distributed Systems

Gurugram, India | +91-916-100-8426 | akashbajpai227@gmail.com

LinkedIn: linkedin.com/in/strikercode | GitHub: github.com/stikercode08

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Go, SQL
- **Backend:** Node.js, Express.js, FastAPI, Django, REST APIs, GraphQL, Microservices
- **Frontend:** React.js, Vue.js, Angular.js, Next.js, Redux, Tailwind CSS
- **Databases & Caching:** MongoDB, PostgreSQL, MySQL, Redis, Firebase, Vector Datastore
- **Cloud & DevOps:** AWS EC2, S3, Lambda, CloudWatch, Docker, Terraform, Ansible, CI/CD
- **Tools & Concepts:** Git, Jest, Pytest, Postman, Selenium, Distributed Systems, Caching, API Design, Server-Side Pagination

PROFESSIONAL EXPERIENCE

Poshn

Senior Full Stack Engineer

Gurugram, India

April 2025 – Present

- Engineered backend services for procurement, billing, and financial analytics platforms supporting thousands of daily active users across supply-chain operations.
- Reduced API response latency by 40% by redesigning MongoDB aggregation pipelines, improving indexing strategies, and introducing Redis caching for high-frequency queries.
- Developed a scalable financial reporting engine handling large datasets using aggregation pipelines, server-side pagination, and caching, improving report reliability under heavy load.
- Automated infrastructure provisioning with Terraform and Ansible, reducing environment setup time by 70% and improving deployment consistency across environments.
- Strengthened production reliability by implementing AWS autoscaling and CloudWatch monitoring, reducing manual operational overhead during traffic spikes.
- Collaborated with finance and operations stakeholders to streamline reconciliation and reporting workflows, improving data visibility and reducing manual effort.

Full Stack Engineer

September 2024 – March 2025

- Developed internal dashboards and workflow systems using Vue.js and Node.js, improving operational visibility for procurement and finance teams.
- Built secure REST APIs for invoice management and reconciliation workflows handling critical financial operations.
- Streamlined release processes by implementing CI/CD pipelines, reducing deployment cycles by 40% and improving delivery reliability.

Kyndryl

Software Engineer

Hyderabad, India

December 2023 – May 2024

- Strengthened enterprise platform security by implementing encryption, role-based access control, and audit logging mechanisms.
- Performed infrastructure scaling and capacity planning to support increasing enterprise workloads while maintaining platform stability.
- Automated monitoring workflows and infrastructure scripts, reducing manual intervention and improving operational efficiency.
- Diagnosed and resolved production performance bottlenecks, contributing to 99.9% system uptime.

uFaber Edutech Pvt Ltd

Full Stack Developer

Mumbai, India

January 2022 – November 2023

- Built a digital wallet and reconciliation platform using FastAPI and MongoDB, processing 10K+ monthly transactions and improving payment tracking.
- Developed a real-time scheduling platform using Django REST Framework, React.js, Angular.js, and Zoom APIs, reducing manual coordination by 75%.
- Optimized CMS architecture and Firebase storage workflows, improving application performance by 2x and reducing media retrieval latency.
- Created an automated lead distribution system integrating Facebook and Google Ads APIs, improving lead response efficiency by 35%.
- Delivered a headless CMS using Strapi and Gatsby, enabling non-technical teams to independently manage and publish content.

PROJECTS

RAG-Based Document Search & AI Query System 2026

- Built a Retrieval-Augmented Generation (RAG) platform enabling semantic search and AI-powered querying across large document datasets.
- Developed vector embedding pipelines using OpenAI embeddings and MongoDB vector search for contextual document retrieval.
- Implemented chunking, metadata indexing, and caching strategies to improve retrieval accuracy and reduce response latency.
- Designed scalable backend APIs for ingestion, retrieval, and conversational querying workflows using Node.js and Redis.

Scalable Reporting Engine with Pagination & Caching 2025

- Designed a scalable reporting engine for large financial datasets using MongoDB aggregation pipelines and server-side pagination.
- Reduced query response time by 50%+ through Redis caching and optimized indexing strategies.
- Implemented cache invalidation and incremental update mechanisms to maintain data consistency under high-concurrency workloads.

Microservices Authentication & API Gateway System 2025

- Architected authentication workflows across distributed services using JWT-based authorization and centralized API Gateway routing.
- Implemented secure cookie handling, CSRF protection, and role-based access control across services.
- Designed scalable request routing with service isolation and load balancing for improved reliability and maintainability.

EDUCATION

University of Lucknow 2018 – 2021

Bachelor of Science in Computer Science
