PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience building scalable backend systems, distributed architectures, and high-performance web applications. Strong expertise in designing APIs, optimizing database performance, and implementing caching and infrastructure automation to support high-throughput systems.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript (ES6+), TypeScript, Python, Go, SQL
- **Backend:** Node.js, Express.js, Django, Django REST Framework, FastAPI, Strapi
- **Frontend:** React.js, Vue.js, Redux, Next.js, Tailwind CSS
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis, Firebase
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, CloudWatch), Docker, Ansible, CI/CD
- **Architecture:** REST APIs, GraphQL, Microservices, Distributed Systems, Caching Strategies
- **Tools:** Jest, Pytest, Postman, Git, Webpack

PROFESSIONAL EXPERIENCE

Poshn <i>Senior Full Stack Engineer</i>	Gurugram, Haryana, India April 2025 – Present
---	--

- Designed and scaled backend services for procurement, billing, and analytics platforms using Node.js, Python, MongoDB, and Redis, supporting thousands of daily active users.
- Reduced API latency by 40% by optimizing MongoDB queries, implementing efficient indexing strategies, and introducing Redis caching for high-frequency read operations.
- Built a high-performance reporting engine handling large financial datasets using aggregation pipelines, server-side pagination, and caching, ensuring consistent performance under heavy load.
- Led infrastructure automation using Terraform and Ansible, reducing environment setup time by 70% and improving deployment consistency across environments.
- Implemented autoscaling and monitoring solutions on AWS (EC2, CloudWatch), enabling systems to dynamically scale based on traffic patterns and maintain high availability.

<i>Full Stack Engineer</i>	September 2024 – March 2025
----------------------------	-----------------------------

- Developed internal dashboards and workflow systems using Vue.js and Node.js, improving operational visibility for procurement and finance teams.
- Built secure and scalable REST APIs for invoice management and reconciliation, handling critical financial workflows.
- Implemented CI/CD pipelines to automate deployments, reducing release cycles by 40% and improving delivery reliability.

Kyndryl <i>Software Engineer</i>	Hyderabad, Telangana, India December 2023 – May 2024
--	---

- Implemented security mechanisms including encryption, role-based access control, and audit logging for enterprise systems.
- Performed capacity planning and infrastructure scaling to support increasing workloads and ensure system stability.

- Developed infrastructure automation scripts and monitoring workflows, improving operational efficiency and reducing manual intervention.
- Diagnosed and resolved production performance issues, maintaining 99.9% system uptime.

uFaber Edutech Pvt Ltd

Full Stack Developer

Mumbai, Maharashtra, India

January 2022 – November 2023

- Designed and implemented a digital wallet and payment reconciliation system using FastAPI and MongoDB, processing 10K+ monthly transactions.
- Built a real-time scheduling platform using Django REST Framework and React with Zoom API integration, reducing manual coordination by 75%.
- Improved CMS performance by 2x through optimized storage architecture and Firebase integration.
- Developed a lead distribution system integrating marketing APIs (Facebook, Google Ads), improving response time and operational efficiency by 35%.
- Built a headless CMS using Strapi and Gatsby, enabling non-technical teams to manage content independently.
- Managed and maintained backend services across AWS EC2 and DigitalOcean, ensuring system reliability and uptime.

PROJECTS

Scalable Reporting Engine with Pagination & Caching 2025

- Designed a scalable reporting engine for large financial datasets using MongoDB aggregation pipelines and server-side pagination.
- Reduced query response time by 50%+ through Redis caching and optimized indexing strategies.
- Implemented cache invalidation and incremental update mechanisms to maintain data consistency without relying on CDC pipelines.
- Explored in-memory data strategies using PostgreSQL to improve report generation speed and handle high-concurrency workloads.

Microservices Authentication & API Gateway System 2025

- Architected authentication flow across distributed services (User, Product, Payments) using JWT-based token sharing and centralized API Gateway.
- Implemented secure cookie handling, CSRF protection, and role-based access control across services.
- Designed scalable request routing with load balancing and service isolation.

MongoDB Cluster Optimization & Connection Management 2025

- Optimized MongoDB usage in replica set environments, improving connection handling and query performance.
- Debugged production-level issues including connection resets, timeouts, and aggregation pipeline failures.
- Implemented read/write routing strategies and indexing improvements for high-concurrency workloads.

EDUCATION

University of Lucknow

Bachelor of Science in Computer Science

2018 – 2021
